About us

The Safety World Earthing System is manufactured using high-quality and industry-approved components to deliver complete and reliable earthing solutions. Our manufacturing range includes backfill compound chemical bags that enhance soil conductivity and maintain low earth resistance, along with GI earthing electrodes and copper earthing electrodes designed for high durability and corrosion resistance. These products ensure efficient dissipation of fault current and long-term performance under all soil conditions. In addition to manufacturing, Safety World also provides professional earthing installation services, offering end-to-end solutions that meet electrical safety standards for residential, commercial, industrial, and renewable energy projects..

Our Products

G.I Electric rode

Earth pit cover

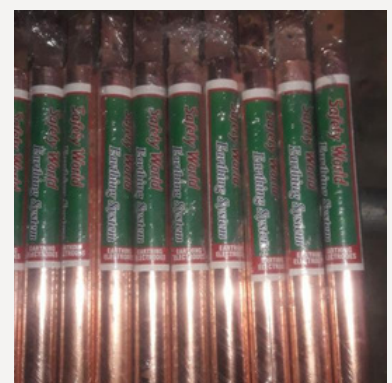

Copper Strip

Copper bonded lighting arrestor

Back Fill compound

Copper Electric rode

Our Service

Earthing installation services for complete electrical safety. Our trained technicians install GI and copper earthing systems using advanced backfill compounds to achieve consistently low earth resistance. The service ensures protection against electric shock, equipment damage, and fault currents, while meeting all applicable electrical safety standards for residential, commercial, industrial, and renewable energy installations.
